PERSONAL STATEMENT

I'm a full stack web developer, living in Park City, Utah. I first started coding as a Assembler Language programmer on Missile-Space Track system in the US Air Force. I spent my AF career in the IT field managing computer-communications infrastructure and software project. Post military I worked at a number of start-up software companies...eventually starting my own that focused on customer relationship management.

I've always loved the creative process and teamwork that goes into developing a software product. So, I decided to refocus my career into that passion as a software developer. That passion has also transcended into mentoring others become software developers.

EDUCATION and CERTIFICATION

BS – Computer Science

MA – Computer Resources Management

Project Management Professional (PMP #1342546)

EXPERIENCE

Owner – Nick Coleman, LLC, Park City, UT

I run a small business that develops customer relationship management (CRM) software enabling real estate sales professionals to increase their productivity and sales volumes by effectively managing their client base and transactions. I augment this with mobile apps that help consumers understand the cost of home ownership.

Volunteered as a bootcamp mentor for a [Pando Labs](#) (a non-profit organization in Park City, UT) to teach Front-End web development (JavaScript, HTML, CSS, Node.js, EJS) to low-income, service-level employees. Worked on software projects at Thinkful bootcamp to develop React and React-Native applications as a continuing education program.

Project Manager – Ameritege, San Diego, CA

Founding employee of a technology company that acquires mature enterprise software businesses and provides software-consulting services. Managed Software Projects, Operations, and Consulting Services including managing off-shore development staff in both enterprise and startup environments.

IT Director – Aonix, San Diego, CA

Aonix was created from three international companies that developed software modeling tools and software compilers. I ran their US and European IT operations and was responsible for successfully merging disparate IT infrastructure, communications systems, contracts and technical staff.

US Air Force

Retired as a Lieutenant Colonel. Spent my career as an Information Technology officer with positions ranging from running IT operations at Defense Special Weapons Agency (managed/tracking US nuclear weapons stockpile) to IT Director for the Secretary of the Air Force (ran the IT infrastructure including software development) to Network Operations Director for Defense Communications Agency (managed and architected the military's internet backbone in Europe) to being an IBM Assembler Language software developer (specialized in radar software that tracked deep space objects).
