PERSONAL STATEMENT

I'm a full stack web developer, living in Park City, Utah. I first started coding as an Assembler Language Programmer on Missile-Space Track systems in the US Air Force. I spent my Air Force career in the IT field managing computer-communications infrastructure and software projects. Post military I worked with a number of start-up software companies. And, eventually started my own business that focuses on customer relationship management software.

I've always loved the creative process and teamwork that goes into developing a software product. And, I decided to refocus my second career into that passion as a software developer. That included completing a four-month bootcamp with Thinkful to learn React and React-Native.

SPECIALTIES

Clean, Efficient Code	Problem Solving	Pair Programming
+	+	+
New Innovative Technologies	Critical Thinking	Team Work

LANGUAGES, LIBRARIES, and FRAMEWORKS

React	React-Native	JavaScript ES6
Firebase	MongoDB	Node.js

EDUCATION and CERTIFICATION

BS – Computer Science
Masters – Computer Resources Management
Project Management Professional (PMP #1342546)

EXPERIENCE

Owner – Nick Coleman, LLC, Park City, UT

I run a small business that develops customer relationship management (CRM) software enabling realtors to increase their productivity and sales volumes by effectively managing their client base and transactions. I also augmented this with iOS apps that help consumers understand the cost of home ownership.

As continuing education, I completed a four-month fulltime, full stack bootcamp with Thinkful.com that focused on React and React-Native. And, I also volunteered as a bootcamp mentor for a Pando Labs (a non-profit organization) to teach Front-End web development (JavaScript, HTML, CSS, Node.js) to low-income, service-level employees.

Software Project Manager – Ameritege, San Diego, CA

I was a founding employee of a technology company that acquired mature enterprise software businesses and provided software-consulting services. While there I managed Software Projects, Operations, and Consulting Services. This also included managing offshore development staff in both enterprise and startup environments.

IT Director – Aonix, San Diego, CA

Aonix was created from three international companies that developed software modeling tools and software compilers. I ran their US and European IT operations and was responsible for successfully merging disparate IT infrastructure, communications systems, contracts and technical staff.

US Air Force

I retired as a Lieutenant Colonel. And, I spent my career as an Information Technology officer with positions ranging from running IT operations at Defense Special Weapons Agency (managed/tracked US nuclear weapons) to IT Director for the Secretary of the Air Force (ran the IT infrastructure including software development) to Network Operations Director for Defense Communications Agency (managed and architected the military's internet backbone in Europe) to starting that military career as an IBM Assembler Language programmer (specializing in software that tracked deep space objects and ballistic missiles).

HOBBIES

Running, Skiing, Fly Fishing, Off-Roading,
